

Spring REST using Spring Boot 3 | Cognizant DN 5.0

Hands-on 1: Create a Spring Web Project using Maven

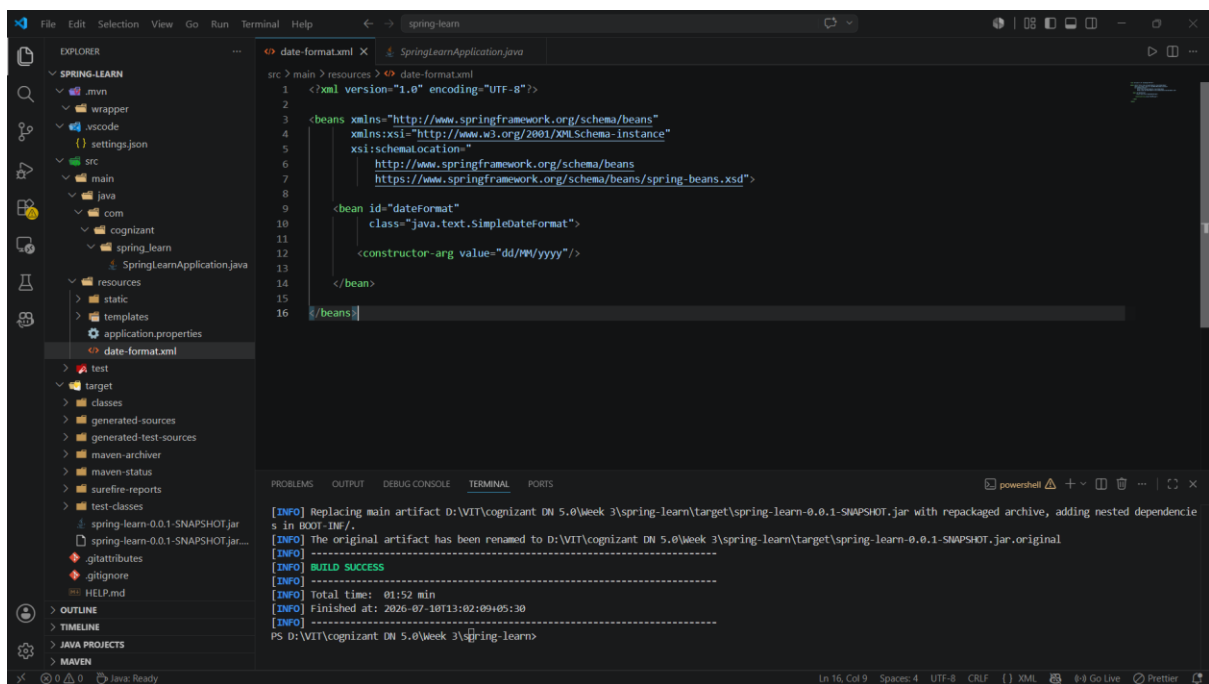

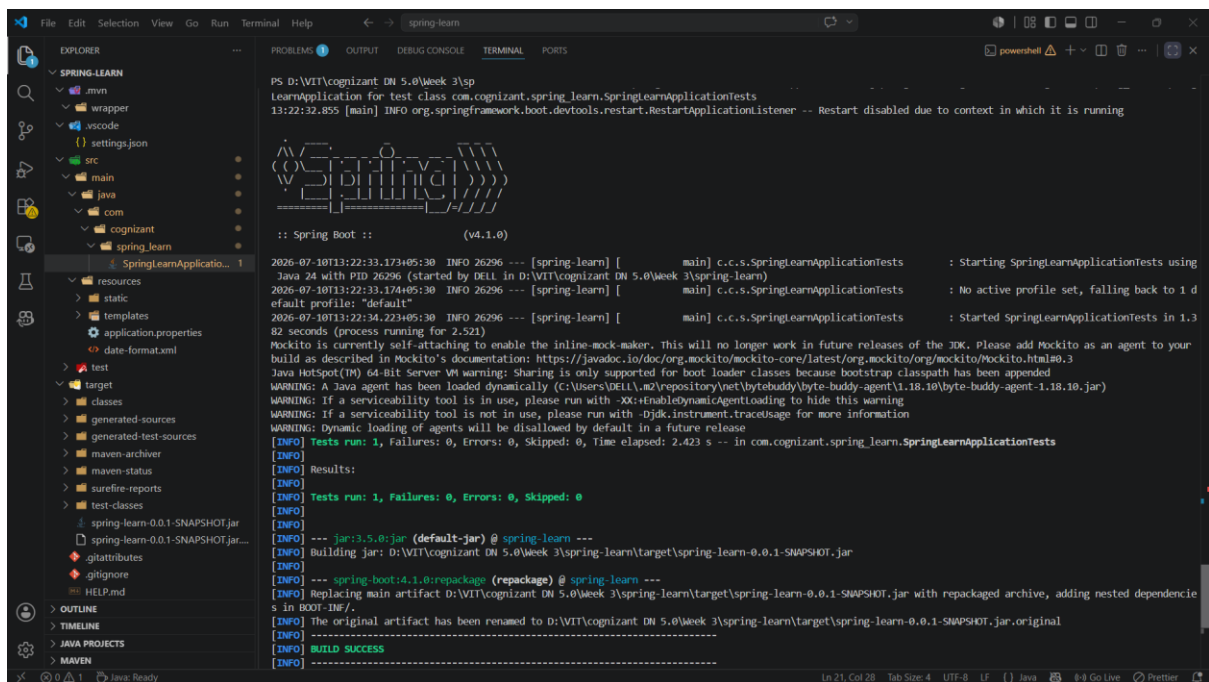

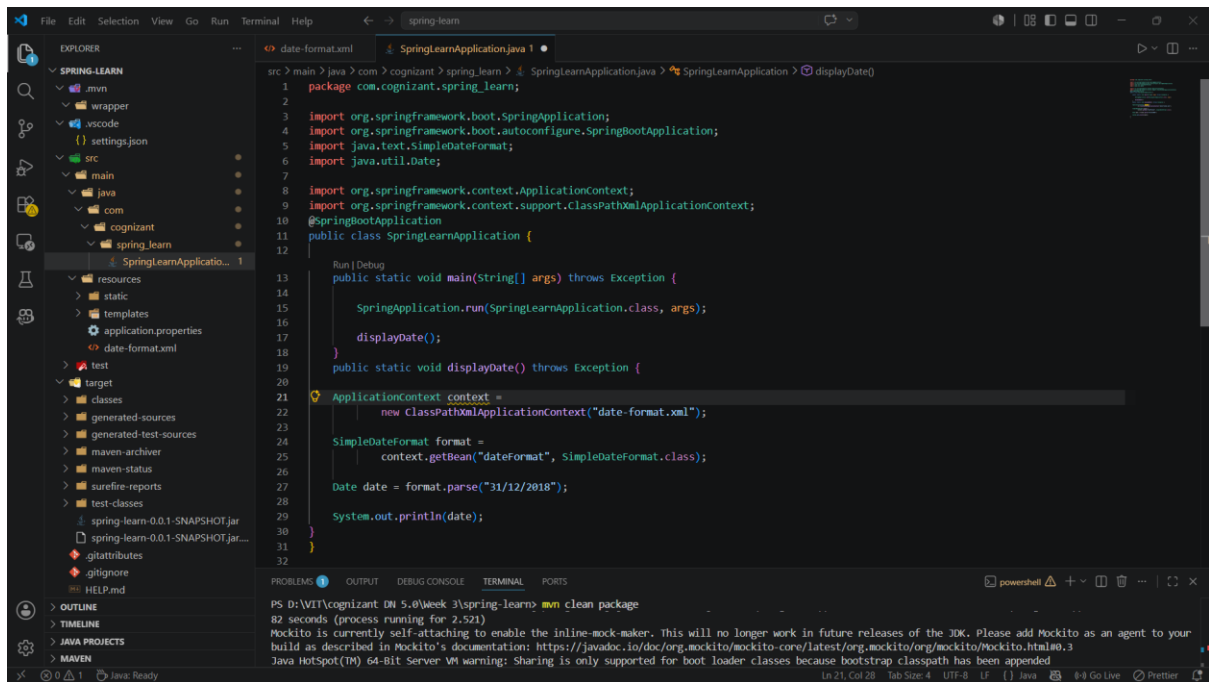

Steps Performed

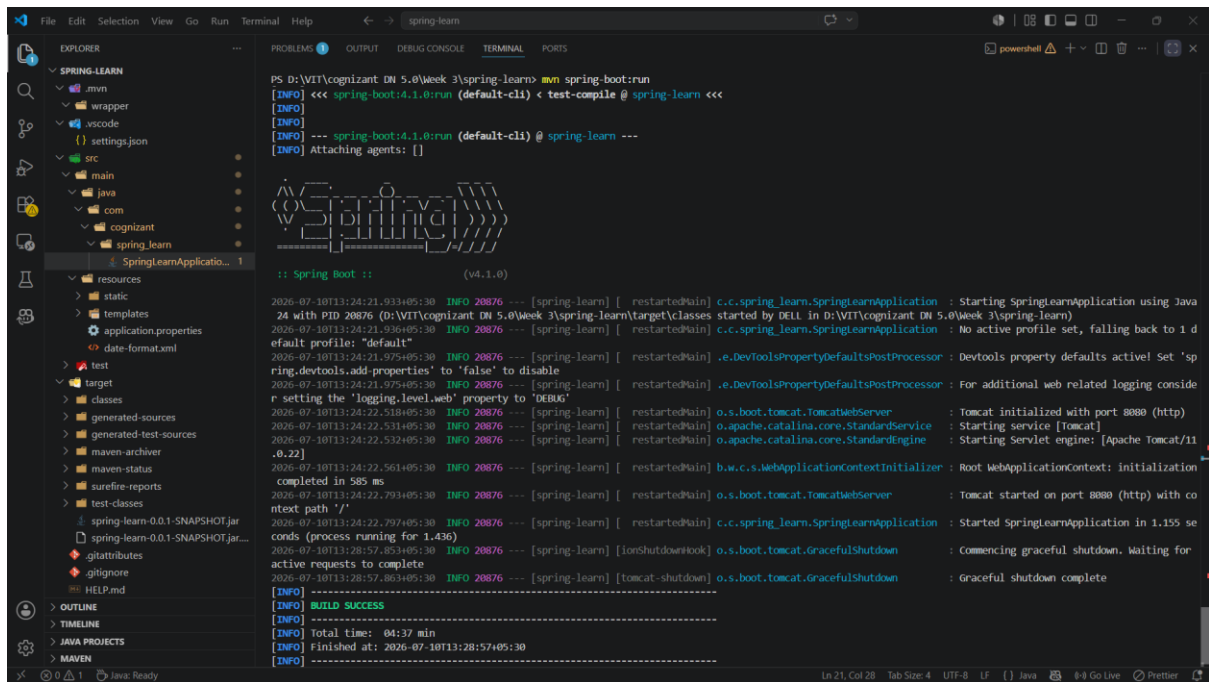

1. Opened **Spring Initializr** (<https://start.spring.io>).
2. Selected **Maven Project**.
3. Chose **Java** as the programming language.
4. Set the project details:

- Group: com.cognizant
 - Artifact: spring-learn
 - Package: com.cognizant.springlearn
5. Added the following dependencies:
 - Spring Web
 - Spring Boot DevTools
 6. Generated and downloaded the project as a ZIP file.
 7. Extracted the project and opened it in Visual Studio Code.
 8. Maven automatically downloaded all required project dependencies.
 9. Built the project using the command: mvn clean package
 10. Verified that the build completed successfully (**BUILD SUCCESS**).
 11. Maven generated the executable JAR file inside the target directory.

Hands-on 2: Load SimpleDateFormat from Spring Configuration XML

```
PS D:\VIT\cognizant DN 5.0\Week 3\spring-learn> mvn spring-boot:run
[INFO] <<< spring-boot:4.1.0:run (default-cli) < test-compile @ spring-learn <<<

```

Steps Performed

1. Created a new Spring Boot Maven project.
2. Added the required Spring Boot dependencies in pom.xml.
3. Imported the project into VS Code.
4. Verified the default project structure generated by Spring Initializr.
5. Built the project using Maven: mvn clean install
6. Ran the Spring Boot application using: mvn spring-boot:run
7. Verified that the embedded Apache Tomcat server started successfully on port **8080**.
8. Confirmed the application started without any build or runtime errors.
